JULIUS-K9<sup>®</sup> CATALOG

[julius-k9.com](http://julius-k9.com)

The catalogue you are holding in your hands represents the JULIUS-K9® brand, which is very popular among dog owners. All of our products are characterized by high quality, aesthetics and comfort; guaranteed - in addition to being OEKO-TEX® certified, tested European materials and tensile tested German straps - by the professional knowledge and the needs of dog trainers, rescue and police dog handlers around us.

*As the CEOs of the company say: "We are never satisfied, our quest for perfection is endless, but we must add that we have put all our knowledge into these products, and we have managed to convince even the most critical customers in terms of functionality. As a result, we have millions of satisfied, new and regular, customers every year.*

*When you are holding one of our products in your hands, please remember that we appreciate personal feedback, be it positive or negative. We know that we can only develop further with your help. Our successes has given us the opportunity to become prominent supporters and participants of numerous humanitarian and animal welfare projects over the 20 years of our existence, allowing us to return the goodness that we have been given to the dogs, which form the basis of our business.*

*Thank you!"*

# IDC® Duo-flex®

## DOG HARNESS WITH AN ELASTIC CHEST STRAP

The elastic chest strap design eliminates the adverse effects of micro-vibrations (HAVS)

Leading the dog on a leash puts a constant load on the joints.

This may cause pain or slow the healing of joint injuries. The use of the Duo-Flex® dog harness, however, is gently on the joints.

A chest pad resting flat on the chest of the dog, and thus the chest strap, makes the dog harness more comfortable and safe to use.

The elastic chest strap design of our new development follows every move of the dog and the leash, and eliminates the adverse effects of the micro-vibrations generated when leading the dog on a leash.

1. DUO high-visibility element (reflective, phosphorescent)

2. Elastic torch holder

3. Replaceable side label

4. DUO-FLEX® elastic element

5. Duo-Flex® replaceable chest strap and chest pad

6. Replaceable chest strap label

## ORIGINAL K9® POWERHARNESS

SINCE 1997

IDC® POWERHARNESS

SINCE 2010

The most successful dog harness in the world is the IDC® Powerharness, with its trademarked designs and utility models, which harmoniously unite aesthetic experience and usage value. Similar to the most famous patented ideas in the world, JULIUS-K9® inventions are also based on the further development or the perfection of already present products, even those which are widely used. The aim was to create a "perfect" harness from a practical point of view. The chest strap of the IDC® dog harness and the neckline of the saddle part combine the advantages of Y-harnesses and chest strap harnesses.

A dog harness that is not only a high-visibility vest, but is also suitable for lifting the dog, attaching side bags, and is simple to put on even for everyday dog owners, stirred the imagination of the leading armed forces and rescue dog units of the world at the end of the 1990s. A reliable professional production team allowed the implementation of the handle and closing elements with maximum loadability, and the triple quality control policy followed in series production. The German OEKO-TEX® certified lining and straps, and the buckles, made from Swiss materials guarantee a long service life.

In the case of the JULIUS-K9® dog harnesses, in addition to practicality and high quality, the key to success was the targeting of human emotions. In an unprecedented way, the product offered an opportunity for the attachment of side labels carrying information, attachable by hook & loop fasteners. Initially the usual service dog labels, like POLICE, ARMY etc. were used, then labels like COOL MAN, MINE IS BIGGER, MACHO, SEXMACHINE etc. also appeared on some dogs, and then an avalanche started.

The reputation of JULIUS-K9®, thanks to the huge success of the so called K9® Powerharnesses (1997), reached the farthest corners of the world faster than production could keep pace with. Thus it is no wonder that this fashion craze brought to life a number of copies, necessitating further development in addition to the legal struggles. In 2010 this necessity to act brought to life a product line that became famous under the brand name IDC®, which became the exclusive sub-brand of JULIUS-K9® within 5 years.

*Our product is protected by Community Design.*

## CHARACTERISTICS OF THE IDC® POWERHARNESSES / SIZES: 0-4

### WATER-REPELLENT TOP COVER

### ELASTIC TORCH HOLDER

The torch holder is elastic, thus it is suitable for attaching torches of different diameters. The torch holder is made of high quality German materials. It can be used simultaneously with the side bag. An indispensable accessory for search and rescue dogs as well as dogs working in the dark. It is also ideal for evening walks, allowing us to monitor the movement of the dog.

### REFLECTIVE EDGES AND CHEST STRAP

An important task of the IDC® Powerharness is to function as a high-visibility vest on the dog. The grey strip on the chest strap, adjustable by hook & loop fasteners, and the edging of the dog harness are made of a reflective material. Chest pads and Y-straps can be attached to the chest strap. The chest strap line has proven to be excellent in physiotherapy tests.

### PHOSPHORESCENT, REPLACEABLE SIDE LABEL

The JULIUS-K9® logo glows even in total darkness. A JULIUS-K9® development (2009)

### UNBREAKABLE BUCKLE MADE FROM SWISS MATERIALS

### CLOSABLE HANDLE

Sizes Mini-Mini and Mini: closable by hook & loop fastener  
Sizes 0-4: closable by rubber strap

### SECURING THE IDC® HANDLE

When the dog is running freely, the handle (and the central ring) should be closed for traffic safety reasons! The rubber strap on the IDC® Powerharness (sizes 0-4) can be used in 4 different positions. Either only the central ring or only the handle is closed, or both of them, or neither of them. For the other harness sizes, the handle can be closed by hook & loop fastener. This minimizes the risk of getting tangled up.

### BREATHABLE, SKIN-FRIENDLY LINING

Unduly, little attention is paid to this excellent property of the harness. The OEKO-TEX® clothing material and the related strict standards are applied in the production of products intended for human use.

### SIDE BAG FIXING OPTION

The side bag is available in 3- and 4-litre versions, and can be attached to larger Powerharnesses of sizes 0-4. A JULIUS-K9® development (2002). From 2013, a smaller IDC® universal side bag was introduced, with a volume of 250 cm³. It is excellent for carrying all personal documents, vaccination records, a telephone and treats.

### PERFECT ERGONOMICS

Thanks to a major development of the IDC® Powerharness, the chest strap is pointing downwards, distributing the acting forces on the chest of the dog. Here the pulling force acts not on the neck, but on the chest muscles. A JULIUS-K9® development (2009).

### AVAILABLE WITH A SAFETY FASTENER

In black it is available with a safety fastener

The attachable safety strap fastener was developed by JULIUS-K9® in 2004 especially for service dogs. This practical accessory increases the loadability of the buckle of the belly strap by about 60 kg. It ensures the usability of the harness if the buckle gets damaged (chewed).

In 2013 it was added to the official service dog harness of police dog units in London.

## MANTRAILING & OUTDOOR HARNESS

It is suitable for leisure activities where the dog is in the lead. During mantrailing the dog is searching for a particular person by tracking down the individual scent in any kind of environment. In canicross and other sports activities involving running on a leash, the dog is also ahead of the owner, and may pull the owner holding the leash. The mantrailing / outdoor harness of JULIUS-K9® has been designed specifically for mantrailing and activities involving running.

**S-L/XL  
SIZES**

The mantrailing harness was developed with the participation of the instructors of the Budapest Mantrailing Academy. After a 4-month test period, the product was introduced in the spring of 2017 at the INBTI Seminar.

Taking the measurements and adjusting the IDC® Powerharnesses and Original K9 dog harnesses correctly

ATTENTION! THE FOLLOWING INFORMATION WITH PICTOGRAMS IS REQUIRED TO BE DISPLAYED ON ALL SITES WHERE JULIUS-K9® DOG HARNESSES ARE SOLD. THE PRODUCT INFORMATION INCLUDES A VIDEO AS WELL, WHICH SHALL ALSO BE DISPLAYED IN THE WEBSHOPS. THIS MINIMIZES THE RISK OF DAMAGE RESULTING FROM THE SELECTION OF A WRONG HARNESS SIZE OR FROM INCORRECT ADJUSTMENT.

The chest strap that can be opened and adjusted by hook & loop fasteners is a JULIUS-K9® development (1997). The chest strap is threaded through a loop adjuster and closed on itself on the side towards the chest of the dog. Between the minimum and maximum settings the harness can support a load equivalent to several times the weight of the dog. The chest circumference should be measured where the strap is supposed to be located. Choosing the correct size ensures maximum freedom of movement and protects the neck and shoulders.

TAKING THE MEASUREMENTS CORRECTLY

For selecting the correct size it is essential to take the measurements accurately. The girth of the dog is measured behind the front legs, approximately four fingers away from them for sizes 0, 1, 2, 3 and 4, and two fingers away from them for sizes Baby1, Baby2, Mini-Mini and Mini.

PUTTING ON THE DOG HARNESS

When putting on the dog harness, special care should be given to the correct adjustment of the chest strap and the belly strap. If the straps are left too loose, the dog can even wriggle backwards out of it. While a belly strap that is adjusted too tight is "only" extremely uncomfortable for the dog, the buckle of a chest strap that is adjusted too tight is under the armpits of the dog, and painfully rubs the skin.

The belly strap is adjusted correctly if you can slide your fingers under the harness on the back of the dog.

SECURING THE HANDLE

The handle part on the IDC® Powerharness has 4 different closing options. Either only the central ring, or only the handle, or both the handle and the central ring are closed, neither of them is.. For IDC® harness sizes Mini, Mini-Mini, and K9® harnesses the handle can be secured/closed by the hook & loop fastener. This minimizes the risk of getting tangled up. This is especially important when the dog is running freely.

WHAT TO DO IF THE DOG BACKS OUT OF THE HARNESS?

If your dog attempts to slip out of the harness by backing out of it, or tries to pull its head out of the collar, avoid tightening the leash. It may be useful to use a chest pad as an accessory.

CHOOSING THE CORRECT HARNESS SIZE IS ESSENTIAL FOR SAFE AND COMFORTABLE USE.

**Attention!** Choosing a wrong harness size, or incorrect harness adjustment and collar use may result in the dog escaping from the harness or the collar. If the harness is too small, the chest strap may squeeze the neck of the dog. Choosing a wrong harness size may result in injury. The chest strap may put the pressure on the neck in stead of distributing it over the chest area.

The right harness size should leave enough room in the shoulder area, and the dog should be able to move its legs freely. If the harness is too big, the dog may step over the chest strap with its front legs. JULIUS-K9® will not assume any responsibility for damage arising from choosing a wrong harness size or adjusting the harness incorrectly.

CLEANING AND STORAGE

Do not machine wash. Hand wash, maximum temperature 40°C/105°F. Wash separately.

STORE IN A DRY PLACE, AWAY FROM DIRECT SUNLIGHT.

# IDC® POWERHARNESS WITH SIDE RINGS

*European  
handmade*

SIZE 0

SIZE 1-3

Attention! For securing your dog in a car, attach one seat belt adapter to each side ring on both sides. We also recommend the use of a chest pad with the dog harness, which can prevent the dog from getting out of the harness, and can distribute the forces acting in the event of braking and turning.

This harness - by design - is not suitable for absorbing the forces caused by high-impact collision accidents or the inertia of the body. For this purpose use a special harness that surrounds the entire trunk of the dog.

## IDC® BELT HARNESS

In addition to the already familiar lines, the Color & Gray® collection of the IDC® belt harnesses created in 2015 has further important features for improved comfort. The edges of the straps are rounded and thickened to ensure that leading on a leash causes the least possible inconvenience to the dog. The trademarked design form and colour scheme offers several accessories within the Color & Gray® collection both to hobby and professional dog owners.

FLAG PATTERNED HARNESS

## SPECIAL DOG HARNESSSES IDC® MULTIFUNCTIONAL DOG VEST 3IN1

A multifunctional vest (swimming vest) with removable floating foam pads that helps the dog to stay on the surface of the water, and makes lifting the dog easier on the ground, with the foam pads acting as pressure distribution elements (rehabilitation vest).

By removing the floating foam pads from the pockets, you get a great neoprene dog jacket protecting your pet from wind, water and cold.

As a swimming vest, it is excellent for hydrotherapy purposes, as increasing or decreasing the number of foam pads can vary the load on the dog. A strong handle and a leash ring for attaching a leash makes it easier to lift the dog from the water or to control it during the exercise.

### AWARD-WINNING PRODUCT

We are pleased and proud to announce that the IDC® multifunctional dog vest 3in1 won the Pet Business Industry Recognition Award in the USA.

## SPECIAL DOG HARNESSSES IDC® NEOPRENE DOG JACKET

It offers effective protection on cold days. The soft, waterproof, elastic material of the IDC® neoprene dog jacket, fits the body of the dog snugly. Its excellent thermal insulation capability is guaranteed by thousands of tiny air bubbles embedded in the neoprene material. It is a comfortable wear for dogs. Its phosphorescent and reflective elements ensure high-visibility. It is very simple to put on: by means of two strong hook & loop fasteners on the chest and under the belly.

## SPECIAL DOG HARNESSES RAPPELLING AND CARRYING HARNESS

The reliability of the latest improved rappelling harness has been proven in mechanical load tests. It is equipped with quick release buckles. The ergonomic design and the pressure distribution foam pads ensure maximum comfort for the dog. It has reflective and phosphorescent parts for perfect visibility. For lowering the dog, the carabiner should be attached to the handles on both sides. The belts, straps and hook & loop fasteners should be adjusted as tight as possible on both the dog and the human. For carrying the dog the two shoulder straps should be connected on the chest.

## THERAPY DOG HARNESS

The JULIUS-K9® therapy dog harness was tested in 2003 by the most renowned Hungarian assistance dog associations. The fixed side bags accommodate everything - from service dog documents to a smart phone required for remote communication. The reflective edging and the phosphorescent JULIUS-K9® side label ensure high visibility.

## REHABILITATION DOG HARNESS

For dogs with musculoskeletal disorders, this elastic harness, made of neoprene material, is of great help for older dogs or dogs undergoing an operation. By holding the handle of the dog harness, we can assist the movement of our pet. It is adjustable by hook & loop fasteners, and is made of elastic and water-repellent neoprene.

# ORIGINAL K9® POWERHARNESS

*European  
handmade*

JULIUS-K9® was the first in Europe to use the brand name Powerharness for dog harnesses, protective equipment and clothing made for both professional and private dog owners. The experts of the company known for the development of dog harnesses, have introduced solutions that have never been used before thanks to their developments. Thus in 2001 the manufacturing company was justified in adding the prefix "Power" to the name of the harnesses. Finally, the two largest Austrian police training centres and the fire service have used the harnesses with excellent results on real missions. The product is made exclusively of materials made in the EU and meets the stringent quality standards.

## ORIGINAL K9® Powerharness

Since 1997

Copycats look the same, but real dogs know the difference®

**CLOSABLE HANDLE BY HOOK & LOOP FASTENER**

**WATER-REPELLENT TOP COVER**

**PHOSPHORESCENT, REPLACEABLE SIDE LABEL**

With JULIUS-K9® logo

**BREATHABLE, SKIN-FRIENDLY LINING**

The OEKO-TEX® clothing material and the related strict standards are applied in the production of products intended for human use.

**UNBREAKABLE BUCKLE MADE FROM SWISS MATERIALS**

The high quality buckles of Original K9® Powerharnesses are constantly checked and tested. The trust you put in quality is rewarded especially during the winter months. They work perfectly and do not break even in freezing weather.

**REFLECTIVE CHEST STRAP AND EDGING**

An important task of the Original K9® Powerharness is to function as a high visibility vest on the dog. The grey strip on the chest strap and the edging of the dog harness are made of a reflective material, thus the high visibility of your dog is guaranteed, especially at night, even at a long distance.

**SIDE BAG FIXING OPTION**

The side bag is available in 3- and 4-litre versions, and can be attached to larger Powerharnesses of sizes 0-4. From 2013, a smaller IDC® universal side bag was introduced, with a volume of 250 cm<sup>3</sup>, it is excellent for carrying all personal documents, vaccination records, a telephone and treats.

**ELASTIC TORCH HOLDER**

The torch holder is elastic, thus it is suitable for attaching torches of different diameters. The torch holder is made of high quality German materials. It can be used simultaneously with the side bag. It is an essential accessory for search and rescue dogs and dogs working in the dark.

**NEVER LEAVE A TIED UP ANIMAL UNATTENDED!**

**STORE IN A DRY PLACE, AWAY FROM DIRECT SUNLIGHT.**

## ALL TIME LIGHT

What can you do for the better visibility of your dog?

The labels on stock attachable by hook & loop fastener are reflective, and the website address on them is phosphorescent. Therefore the dog harness glows when light is shone on it, and even in total darkness without a power source. This is the All Time Light system!

## NATIONAL FLAG PATTERNED LABELS

JULIUS-K9® - The inventor of replaceable harness labels. The brand is now sold in 60 countries worldwide. The national flag patterned labels are attachable by hook & loop fastener, so they are easy to attach to the label fields designed specifically for this purpose on both the K9® Powerharnesses and the IDC® Powerharnesses. They can also be attached to any surface having the loop component of the hook & loop fastener, such as team uniforms and collars with a label field. They are available in two standard sizes: 11x3 cm and 16x5 cm.

# ORIGINAL K9® SIDE BAGS FOR DOG HARNESS

In 2003, the developers of JULIUS-K9® created the first side bag in the world attachable by hook & loop fastener to a dog harness. The equipment attachable the two sides of the dog harness, with a volume of several litres and a waterproof cover, is ideal for touring and hiking. The K9® side bags, and the IDC® side bag, introduced in 2010, offer new opportunities for the shared activities of humans and dogs.

# Y-BELT FOR POWERHARNESSES

In 2003, the developers of JULIUS-K9® created the first product in the world attachable by hook & loop fastener to a dog harness, making the JULIUS-K9® harnesses safer and more comfortable to wear for your dog. This practical accessory connects the chest part and the belly part of the harness, rests flat on the chest, distributing the pressure and securing the harness on the body of the dog as firmly as possible. It is easy to put on in a few moves by means of hook & loop fasteners.

## IT CAN BE USED ON THE FOLLOWING HAR- NESSES:

- IDC® Powerharness Mini-Mini, Mini
- K9® Powerharness Mini-Mini, Mini

**ARTICLE NUMBER:** 162BG-P-M

# IDC® FRONT CONTROL Y-BELT

The IDC® FRONT CONTROL Y-belt is a new version of the Y-belt developed by JULIUS-K9® in 2003 and popular to this day. Offering further opportunities for special powerharnesses equipped with a chest strap openable by hook & loop fastener with respect to training and everyday leading on a leash. With the IDC® FRONT CONTROL Y-belt the dog can be controlled easily, without force and conflict in traffic, during training or in dangerous situations.

For both work and walking, a leash can be attached to the ring of the Y-strap and the central ring of the dog harness simultaneously. Thereby the body of the dog becomes easy to control and manoeuvre. In this case, the use of a JULIUS-K9® double carabiner leash is an ideal solution for leading on a leash. A further advantage of the FRONT CONTROL Y-belt is that it can be attached to either side of a chest strap openable by hook & loop fastener, depending on the nature of the practice of leading on a leash in question. When leading the dog next to a bicycle\*, the FRONT CONTROL belt can be attached by sliding it to the given side of the chest strap, thereby the distance of the dog can be more closely controlled. This patent-pending innovation with its trademarked design patterns can be ordered in three different sizes for dog harnesses from Mini to Size 3.

Attention! The hook & loop fastener of the FRONT CONTROL Y-belt shall be fastened to the hook & loop fastener of the chest strap of the dog harness along its whole length in order to avoid the slipping of the Y-belt when handling the leash. When the FRONT CONTROL Y-belt is no longer needed, remove it by opening the chest strap in order to prevent it from getting caught.

*\*The local traffic rules in force shall be observed!*

# ELASTIC I-BELT FOR DOG HARNESSSES

**ATTENTION!**

The product shall be connected only to dog harnesses equipped with a chest strap introduced by JULIUS-K9®, openable by hook & loop fastener, and to collars with a quick release buckle. The I-belt shall not be connected to collars with a "choke" function!

A world-first innovation developed by Gyula Sebő at the request of the Tököl Prison and Penitentiary Facility.

PATENT OFFICE REGISTRATION NUMBERS:  
U11 00245, 001924663-0014

**POWERHARNESSES & IDC® POWERHARNESSES**  
**SIZES:** 0 - 4  
**ARTICLE NUMBER:** 162BGI-[S, M, L]

with an elastic loop

The "I" safety belt is a further developed version of the Y-belt, a legendary JULIUS-K9® development, for service and sporting dogs, specifically in extreme situations. It is an elastic, adjustable safety belt, easy to put on and take off, connecting the chest belt and the belly belt of the dog harness, as well as the collar is necessary, keeping the chest belt in the appropriate direction on the chest of the dog even under extreme load.

The "I" safety belt can be attached to the chest strap without fully opening the chest belt of the dog harness. Its connection to the collar is not necessary for everyday use, but recommended when securing the dog in a car. It prevents agile dogs from getting out of the harness.

# IDC<sup>®</sup> LUMINO<sup>®</sup>

## LEASH

The name LUMINO<sup>®</sup> was inspired by the concept of luminescence, which means the emission of light at low temperatures.

One form of this is the phenomenon – photoluminescence – when light emission is initiated by photoexcitation.

1. when the absorbed light is re-emitted immediately, it is called: FLUORESCENCE
2. when the absorbed light is re-emitted after a delay, it is called: PHOSPHORESCENCE

Anti-slip surface

- . Adjustable leash: 220 cm
- . Twin leash: 75 cm
- . Short leash: 35 cm

This leash glows (phosphorescent) in the dark.

It is a strong polyester strap with a silicone-type coating for optimum grip, tested and proven in load tests.

A phosphorescent material is capable of emitting light only after exposure to light, depending on the duration and intensity of light exposure.

- Water-repellent
- Easy to clean
- Disinfectable

With or without a handle.

A leash is basic equipment, so it is especially important for all dog owners to have an easy to use, comfortable and practical leash. The IDC® tubular webbing leash combines these properties. Its durable, heavy-duty material is easy to clean. It can be used for sports, work or dynamic walks.

Its specialty is that it contains phosphorescent threads. Thanks to its unique material, the leash will not cut into the hand even under higher loads. It is equipped with an easy to open, strong and safe carabiner.

The IDC® tubular webbing leash is available in different widths and lengths, and with or without a handle.

PATENT OFFICE REGISTRATION NUMBERS:  
U10 00173 , U10 00180

**SWIMMING LEASH**

Thanks to its material, it floats on the surface of water. Its length of 10 metres is enough to let the dog move freely, yet it maintains a connection between the owner and the dog, providing security and control. Its bright colour ensures excellent visibility.

-------	--------------	---------------------------------	------------------------

**ADJUSTABLE ROPE LEASH**

12 mm	2,2 m	black, with fluorescent threads	20220-S-IDC
-------	-------	---------------------------------	-------------

Our rope leashes are light, resistant, and comfortable to grip. They include fluorescent threads to ensure high visibility. The handle part and the section above the carabiner, subjected to higher loads, are reinforced with leather to ensure stability even under high physical stress. They can be combined with any type of collar and harness.

**RETRIEVER LEASH**

**CONTACT LEASH WITH STOP**

Thanks to the rigid rope of the contact leash, the dog can be safely controlled by small, barely visible hand gestures. It allows you to react to every move of the dog quickly and gently. The stimulus given by the leash causes only temporary inconvenience. It is recommended especially for aggressive or panicking dogs. It is equipped with a double stop to reduce the choking effect.

WIDTH	LENGTH	COLOUR	ARTICLE NUMBER
4 mm	1,1 m	black	20235-KO

01

**SHOW LEASH**

It is an essential item for dog shows. It is thin and elegant, yet its handle is designed for holding larger dogs too. The collar part is adjustable, so it is a comfortable wear for a dog of any size. By pulling it over the head of the dog, it can be adjusted firmly by a slide adjuster. When not in use, it can be folded and put in your pocket, so it will be there when you need it.

WIDTH	LENGTH	ARTICLE NUMBER
3,5 mm	1,2 m	2012AN
	2 m	2020AN

02

**Y-LEASH - POLICE**

The Y-leash is the equipment of police dogs patrolling the streets, but it is also useful for training panicking or very shy dogs to get used to street traffic. The leash can be attached to two different points on the dog simultaneously (two collars, or a collar and a dog harness). Thus it can prevent the accidental escape of the dog.

WIDTH	LENGTH	ARTICLE NUMBER
25 mm	2,2 m	214SL

03

**TRACKING LEASH**

The tracking leash is made of a light, silky rope, so the dog is not disturbed by it during work, and it provides a comfortable and secure grip to the handler as well. It has a high tensile strength, and its slightly slippery surface prevents the formation of inextricable knots. Without a handle.

WIDTH	LENGTH	ARTICLE NUMBER
6 mm	10 m	2010M

04

**TIE-OUT LEASH**

The tie out leash is an ideal solution for building workout and bite training. The elasticity provided by the rubber part helps to avoid potential joint injuries. The leash is designed for a maximum stretching of 50 cm. This way the pull-back effect can be avoided, and it is also easier for the handler to judge the ideal distance.

WIDTH	LENGTH	ARTICLE NUMBER
20 mm	5,5 m	110GL

# COLLARS

.....

safety buckle

closable handle

replaceable harness label

A closable handle located at the central ring allows the dog to be held firmly and lifted securely. It can be fixed firmly by means of a heavy duty buckle made from **Swiss materials** and a safety strap fastener. The **German made** strap material of the collar is easy to clean and dimensionally stable. A hook & loop fastener surface allows the attachment of various labels – from now on your dog can wear labels not only on the harness, but on the collar as well!

# LUMINO®

COLLARS

Products recommended with the IDC® Lumino® collars:

The luminous collars glow in the dark, depending on the intensity of natural or artificial light exposure. A phosphorescent material is capable of emitting light only after exposure to light, depending on the duration and intensity of light exposure. The neon colour is bright even in daylight, especially against the first class black leather lining around the neck of the dog.

Width: 25 mm

Patent Office Registration Number: EP2976945

COLOUR	NECK GIRTH	ARTICLE NUMBER
1. neon	30-65 cm	214HB-L-SN-[45-70]

It is a special combination of a strap covered with 2 mm thick leather and pressure distribution pads, resulting in an extra soft but very strong leather collar, tested to a static load capacity of over 400 kg. With an adjustable and closable handle. Available in different lengths.

# DOG TOYS

# IDC® BALLS

## NEON (FLUORESCENT) IDC® BALL

The neon coloured IDC® fluorescent ball is made from silicone rubber, and it is a very durable motivation toy for both puppies and adult dogs. Due to its angular shape, the fluorescent ball is an ideal bouncing prey, suitable for hiding treats inside, and provides endless fun to your dog while playing. The closable handle protects the dog from potential injuries that can be caused by the loop, if the dog steps into it.

## IDC® CAOUTCHOUC BALL WITH STRING

IDC® caoutchouc ball is made from natural rubber, with a firmly attached, heavy duty string, the handle of which is closable, and adjustable by a rubber slide adjuster. This way the dog can be prevented from stepping into it while playing.

It is an ideal tool for gentle, light play, and for triggering the predatory instinct in young dogs, both in water and on the ground.

With its striking colour and soft design, it is an ideal toy for preparing dogs for dog shows, or for training them to get used to swimming.

It is made with traditional handicraft techniques and sewn by hand, just like the best footballs. The product is available in three sizes.

# LEATHER

## MUZZLES

*European  
handmade*

### LEATHER MUZZLE LIGHT

This muzzle is made of 2.5 mm thick leather straps. It is light and soft, ideal as a first muzzle for your dog. It is available from mini to medium size.

**ARTICLE NUMBER:** 171[size]

light

### LEATHER MUZZLE POLICE

It has been developed especially for service dogs, it is recommended for guard work. The muzzle is handsewn, with metal reinforcement and a cushion pad. The nose part has a neoprene lining to prevent injuries. The neck strap is equipped with a quick release, safety buckle fastener.

**ARTICLE NUMBER:** 1720[1-2-4]

police

### LEATHER MUZZLE CLOSED

A closed muzzle made from a 4 mm thick leather, it is the best protection against bite accidents, but it is still breathable and designed to suit the needs of the dog. It is ideal for every-day use for service, working or sporting dogs, but it is useful even for a stronger pet. It is available in three sizes for medium and large dogs. For dogs between 20-40 kg.

**ARTICLE NUMBER:** 173[1-2-3-4]-G

closed

This product contains nickel and chrome plated elements.

# METAL MUZZLES

Both the straps and the nose padding part of these muzzles have been designed to suit the needs of Austrian and Hungarian service dog units. The nose padding is made of a breathable or closed cell foam layer, which prevents injuries to the nose of the dog and any subsequent infections.

**ARTICLE NUMBER:** 190[size]

The product contains nickel and chrome plated elements.

LEATHER  
JUTE  
COTTON/NYLON

## TUGS

### LEATHER BITE TUG

Leather is a material that every dog likes to take into its mouth: it is soft and natural, and smells good. The at least 2 mm thick leather, due to its slippery surface, encourages the dog to grip it more firmly. It is durable and resistant even to high loads.

### JUTE BITE TUG

It is made from a nylon reinforced, traditional jute material, for developing biting skills.

### COTTON/NYLON BITE TUG

The surface of the cotton fabric is ideal for bite training, as its slippery surface motivates the dog to bite harder. The experts of JULIUS-K9® have improved its load capacity and bite resistance with a nylon material. For the perfect bite experience, the resilience of the tug is provided by inner materials also used in the manufacturing of mattresses. It is available in mixed colours.

## DUMBBELLS

Our dumbbells are made of hardwood, they are resistant and durable. Their design provides a comfortable grip for the dog.

They are available in different sizes and shapes, their weight is adjusted according to the official competition rules.

**ATTENTION!**

Never leave the dog unattended with these products, as it may chew and swallow them! Store in a dry place, away from direct sunlight.

THE TOYS AND TRAINING EQUIPMENT HAVE BEEN DEVELOPED FOR THE SHARED ACTIVITIES OF HUMANS AND DOGS.

YOU USE OUR PRODUCTS AT YOUR OWN RISK. WE DO NOT ASSUME RESPONSIBILITY FOR ANY INJURY RESULTING FROM IMPROPER USE.

### JOGGING BELT

For jogging, cross-country skiing & carefree walking. It is a padded belt with a reflective stripe. Warning! It has built-in protection against sudden pulls, to protect your hand and waist.

### LEASH WITH A QUICK RELEASE MECHANISM

A rubber leash and a quick release mechanism together make a perfect combination. It can be used effectively anywhere, whether for outdoor training or for service dog work. Thanks to its heavy-duty material, the leash is resistant to environmental effects, and dampens sudden pulls and other physical loads. With the quick release mechanism, it can be connected firmly and securely to either a jogging belt, or a tactical belt used during missions. If necessary, it can be disconnected in one quick movement, so the dog can run freely. The sensitive quick release mechanism is immediately activated by a firm push or a strong hit from a police baton, so it will not distract the attention and time of the handler from the events.

### JOGGING BELT WITH RUBBER LEASH

For jogging, cross-country skiing, carefree walking. It is available in three versions, depending on the weight of the dog.

### QUICK RELEASE MECHANISM

This practical little device allows you to release your dog in one quick move, if necessary. During field training there were situations when it is safer for both the dog and the owner, if they are not connected.

In such situations, the owner can release the dog in a moment, without having to stop or look for the connection point of the leash for minutes. The quick release mechanism is especially popular among service dog handlers, as it makes the dog immediately deployable in real situations.

	144BH
leather, soft	144LW
leather, hard	144LH
jute, soft	144JW
jute, hard	144JH

TEASING TUGS

Teasing tugs are tools for developing the grip of beginner dogs. The movement of the leather or cotton/nylon teasing tug imitates the unpredictable movements of a live prey, so it is suitable for triggering and encouraging the predatory instinct.

The dog needs to pay attention to grabbing it firmly, because the material is slippery by nature. Both the leather and the cotton/nylon version are durable, heavy-duty and resistant. The firmly fixed handle makes the work comfortable for the trainer as well.

BITE PAD

1. The cotton/nylon bite pad is available in three sizes, and the largest size is available in soft and hard versions. The highly flexible inner materials and the cover made of the cotton/nylon fabric made by JULIUS-K9® guarantee the perfect bite experience. It is essential equipment for the training of service dogs.

2. The leather bite pad, thanks to its material and slippery surface, is perfectly suitable for improving the biting skills. It is available in soft and hard versions.

3. The jute bite pad is made of the thickest and toughest fabric. It is the equipment commonly used for the guard work of sporting dogs. It is available in soft and hard versions.

The materials of the products are made by the production team of JULIUS-K9®, from beginning to end; from the production of the thread to the fabric.

The fabrics for tugs, sleeve covers and police dog training equipment are made with a high cotton content and polyester reinforcement.

 **ATTENTION!**  
Never leave the dog unattended with these products, as it may chew and swallow them! You use our training equipment at your own risk. We do not assume responsibility for any injury resulting from improper use. Store in a dry place, away from direct sunlight.

TWO-HANDLE BITE WEDGE

PRODUCT TYPE	ARTICLE NUMBER
1. soft	143BK-W
2. hard	144BK-H
3. soft	144BK-W

TWO-HANDLE BITE WEDGE

The 143BK-W is recommended for puppies over the age of 3-6 months, and is the next level in the training of young dogs directly after the 185HL or 185BW teasing tug. The purpose of the bite wedge is to encourage the dog to bite. Its outer cover is gentle on the teeth of the dog, and it is the smallest one among our bite wedges. The softness of the foam and the design of the outer fabric helps the puppy to be trained for sports or hunting to develop a confident grip. An inner plastic frame connects the two wooden handles to each other; this design greatly increases the rigidity and stability of the product.

The 144BK-H and 144BK-W are recommended for dogs over the age of 6-8 months, and they are curved to encourage the dog to bite in the middle. When using this wedge, the dog is forced to open its mouth as wide as for the hard sleeves. The flexibility of the soft inner foam material is perfect for triggering the predatory instinct. With these tools the playfulness of the training can be easily maintained.

3-HANDLE BITE WEDGE

It offers an ideal transition before doing sleeve work by practising a sufficiently deep and secure grip. During playful bite training, this equipment allows the dog to practise jumping into the air and landing on the ground. The design and flexibility of the wedge-shaped grip surface gives the dog a good grip experience, and helps it to learn “nasal breathing”. The bite wedge with cotton/nylon fabric is recommended for dogs with an uncertain grip.

ATTENTION!  
Never leave the dog unattended with these products, as it may chew and swallow them! You use our training equipment at your own risk. We do not assume responsibility for any injury resulting from improper use. Store in a dry place, away from direct sunlight.

2.

**JULIUS**  
**K-9**  
The Original

A JULIUS-K9® development from 2015.

## PUPPY SLEEVE

After training with a teasing tug and a bite tug, the size of the tool, which imitates the prey, can be increased. In 2015 as an addition to a wide range of bite wedges the JULIUS-K9® puppy sleeve (extra flexible bite wedge equipped with a shoulder protector) was developed. It can be an ideal reward for your 6-8-month old dog. Whilst wearing it, in addition to maximum comfort, it allows the trainer to perform playful tug-of-war and sleeve training. When it is hold with the wooden handle the sleeve is great for “swinging” training.

Due to its inner plastic reinforcement the sleeve is super lightweight and at the same time amazingly stable and bite-resistant. These sleeves are available with covers, made of cotton/nylon or jute fabrics made by JULIUS-K9®. The size of the prey is increased for the dog with the size of the shoulder protector. Made of a soft material.

Neither the weight nor the size of the sleeve causes a problem for the dog to carry the prey as a reward. Its weight distribution is symmetrical, encouraging the dog to grab and to hold it at the middle.

PATENT OFFICE REGISTRATION NUMBER: 002748269-0001

## YOUNG DOG SLEEVE

It is equipped with a medium-hard bite wedge. The jute version is made of the thickest jute fabric, while the cotton/nylon version is made with inner fabric reinforcement. After the wide range of bite wedges, the JULIUS-K9® young dog sleeve (extra flexible bite wedge equipped with a shoulder protector) developed in 2015 can be an ideal reward for your 6-8-month-old dog.

Due to its inner plastic reinforcement, the sleeve is super lightweight while amazingly stable and bite-proof at the same time. It is available with a cover made of the cotton-nylon.

The size of the prey is increased for the dog by the shoulder protector made from a soft material as an extension of the material of the sleeve. Neither the weight, nor the size of the sleeve causes a problem for the dog carrying it as a reward. Its weight distribution is symmetrical, encouraging the dog to grab and hold it in the middle.

PATENT OFFICE REGISTRATION NUMBER: 002755686-0001

## JULIUS-K9 SPORTS SLEEVE COLLECTION

The members of the sleeve collection, developed in three different hardnesses by the summer of 2015, wrote themselves into the history of the company as the top models of JULIUS-K9®. The developers put great emphasis on quality materials, and developed the equipment with great care to provide many years of use. The comfort and mobility of the forearm are really displayed while the dog is working.

The hardness of the grip surface is shown by the colour of the shoulder protectors as well. The blue shoulder protector indicates the extra soft version, the red, a medium-hard version, and the black, a hard version. The ones with the red and blue shoulder protectors have a straight grip surface.

General features:

- Extra elbow and handle lining
- Straight blade part
- Fabric underlay under the blade part to limit the elongation of the leather

1. soft: 145K9-2015-LW and 145K9-2015-RW
  - Soft bite surface
  - Bite surface with inner textile reinforcement
  - **Blue shoulder protector and forearm closing element**
  - Extra soft impact area at the blade part

## K9 TRAINING SLEEVE

as the 114K9-R-W and 144K9-L-W short sleeves - with a shoulder protector.

„Germany“ 145K9-2015-DE-RW and 145K9-2015-DE-LW training sleeves

- Soft bite surface, raised at both sides
- **Black shoulder protector with the German national colours**
- Fabric underlay under the blade part to limit the elongation of the leather
- Leather cover subjected to tensile test
- Maximum movability regardless of the arm size of the trainer

## FLYING BOMB®— FLIEGERBOMBE®

After the use of bite wedges, it gives a “sleeve like” grip experience to both the dog and the trainer. The blade part (bite portion) is wedge-shaped; its high flexibility helps beginner dogs during grip and bite work. The jute outer material is made of the thickest fabric. This tool has become essential in improving the jump in the direction of the prey and the grip (bite) in the air.

The very movable and comfortable “Flying bomb®” short sleeve is a fantastic tool to help the trainer divert the movement of the dog during sleeve training. The foam-lined strap at the elbow joint is adjustable to the level of the training and the arm size of the trainer.

The product is ideal as preparation for the one grade harder multifunctional sleeve, equipped with a replaceable protective cover.

## MULTIFUNCTIONAL SLEEVE 2015

This truly unique sleeve was launched into the market in the middle of 2015. Its handle ensures a stable hold from both directions. The grip surface is soft, curved and covered with hard-wearing leather. The equipment is excellent as preparation for the hard sleeve. It is adjustable around the elbow joint. The elbow is fully protected by the plastic frame of the sleeve. It allows a quick change of sides and maximum movability.

The protective cover is attachable by hook & loop fasteners. By replacing the cover as necessary, the use of the equipment can be extended up to 10 years.

polyester cover + cotton/nylon bite surface	144PEBN
polyester cover + jute bite surface	144PEJU

A JULIUS-K9® development from 2014.

PROTECTIVE COVER WITH A REPLACEABLE BITE SURFACE

It is a standard size, adjustable protective cover with a replaceable bite surface attachable by hook & loop fastener and straps. It offers a unique solution for the optimally tight adjustment of the cover on the sleeves. This cover fits all the standard size sleeves used in dog sports (e.g. Sports sleeve; Leather sleeve). If used as intended, it is enough to adjust the cover tighter from time to time, and only the replaceable bite surface attachable by hook & loop fastener needs to be replaced.

It is available in pairs.

CIVIL PROTECTIVE CLOTHING

PRODUCT	ARTICLE NUMBER
jacket	14ZHJ
pants	14ZHH

2in1 SLEEVE

It can be used both as a sleeve (it has the same length as the forearm) and as a bite wedge. It provides the same bite experience for the dog as hard sleeves. It is recommended to use it with a cotton/nylon or jute cover.

CIVIL PROTECTIVE CLOTHING

This super lightweight hidden protective clothing, designed especially for imitating real situations, is an essential wear for the training of service dogs. The sleeve and chest parts of the jacket and the legs of the pants are adjustable by hook & loop fasteners. By adjusting the carefully selected sleeve parts and legs tightly by the hook & loop fasteners, the protective panels inside close on each other. The sleeve parts can be easily released and replaced by pulling a string. It is recommended to wear a light military jacket or other cotton clothing without any unnecessary buckles and pockets to hide the civil protective clothing during work.

Store away from direct sunlight.

The materials of the products are made by the production team of JULIUS-K9® from the beginning to the end, from the production of the thread, to the fabric.

The fabrics for tugs, sleeve covers and police dog training equipment are made with a high cotton content and polyester reinforcement.

ATTENTION!  
Never leave the dog unattended with these products, as it may chew and swallow them! You use our training equipment at your own risk. We do not assume responsibility for any injury resulting from improper use. Store in a dry place, away from direct sunlight.

## PROTECTIVE JACKET AND PROTECTIVE PANTS

This protective clothing has proven its effectiveness in the WUSV competition, it is breathable and scratch-proof thanks to its cotton/nylon material.

It allows the trainer to move freely and naturally, while providing a sporty look. It has a lining made from PE fabric for maximum comfort. The pants and the jacket can be used separately as well, or combined with other accessories.

Our training equipment is to be used at your own risk. We do not assume responsibility for any injury resulting from improper use.
